

# CLOSING IN ON A HEALTHY HOME

CREATING A CLEANER, HEALTHIER, MORE ENERGY EFFICIENT HOME-  
FROM THE GROUND UP

**Controlling humidity is one of the most important steps you can take in protecting your home, ensuring your comfort, and safeguarding your family's health**

## BENEFITS OF CLOSED CRAWL SPACE

- Improved quality of the crawl space & living environment
- Less humidity
- Reduces the susceptibility to insect damage, wood rot, and mold issues
- Annual energy savings from reduced energy use for heating and cooling your home.

*EPA recommends relative humidity levels of 30 to 50%*

## HOW WILL IT SAVE YOU MONEY?

Properly conditioned crawlspaces stay drier than vented crawlspaces, the pipes within them are protected from wintertime freeze/thaw cycles, and require less insulation than vented crawlspaces. This allows for more efficient heating and cooling of your home which usually results in significant energy savings.
